

## GO-Global Product Overview

**Access to Applications Anywhere**

**G**raphOn's GO-Global® software uses any network connection to deliver business applications to any device regardless of platform! GraphOn has the scalable, cross-platform solution for your web access needs. GO-Global *for Windows* allows you to run Windows® applications on Linux® or Macintosh® desktop devices without emulation software. And GO-Global *for UNIX* allows you to run UNIX® applications on Windows or Linux desktops allowing your enterprise to bring specialized applications to otherwise incompatible display devices.

With GO-Global, users can access centrally stored applications, allowing them to be productive from any location. Applications retain their native look and feel. Users never know they're not running the application locally. GO-Global works with existing applications — it does not require rewriting a single line of code. Both native and Java applet solutions provide for the widest display device and browser coverage.

**Product Features**

**Fast, Easy Application Deployment:** GO-Global administration is facilitated by an easy-to-use graphical interface. Within minutes, Windows and UNIX applications can be run from anywhere, including remote offices and customer sites. Rapid time-to-deployment for publishing new applications means greater business flexibility with minimum hassle.

**Simple, Cost-Effective Pricing Model:** GO-Global features a vastly simplified single-vendor pricing structure at nearly half the cost of competing solutions.

**Secure Operation:** GO-Global utilizes native server security for authorized access to published applications, from any web-enabled device.

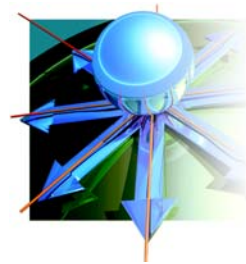

**High Performance:** Based on a unique patented technology, GO-Global experiences minimal performance degradation when transitioning from a native to browser environment.

**Ideal for Deploying to Multiple Platforms:** GO-Global is an ideal solution in heterogeneous computing environments that support a variety of operating systems.

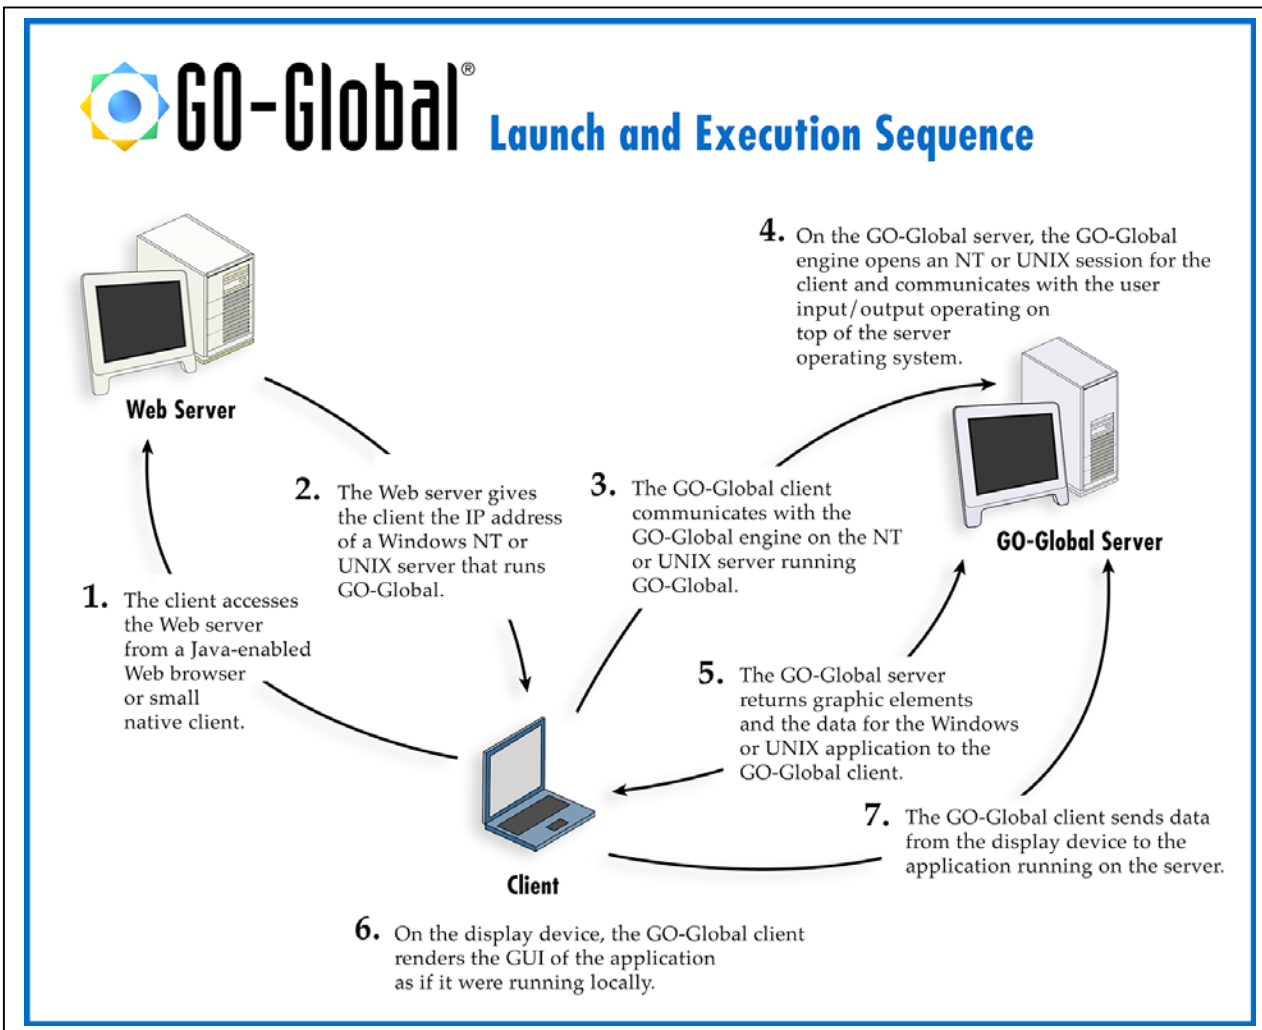

**Extensible and Compliant to Open Standards:** GO-Global provides full support for Java and standard licensing protocols. As new applications and protocols become available, they can be easily integrated into GO-Global environments.

**Reliable:** Administrators can rely on application stability at both the server and client tiers. An advanced architecture ensures that no application processes are disrupted or lost.

**Reconnect:** Users can disconnect from an application session and reconnect at a later time from any display device. This is an important feature for both convenience and disaster recovery.

**Additional Features**

- 24-bit color support
- Local printing
- Local file access
- Web-based client installation

## GraphOn's GO-Global Product Family

Offering access to applications anywhere, GO-Global's product family (*GO-Global for Windows* and *GO-Global for UNIX*) delivers cutting-edge infrastructure software allowing solution vendors to instantly web-enable their full-featured Windows, UNIX, and Linux applications for fast, remote access to any client, regardless of platform.

By bundling with GO-Global, solution vendors can offer Web versions of their existing Windows applications without sacrificing features, product branding, or customer control. GO-Global is fully integrated with the vendor's application and is virtually invisible to the end-user. Applications are centrally stored and administered from a single location, reducing computing costs, improving security, and simplifying license management. Users access these applications from any location — from home, from the road, from abroad, with the same performance they'd expect if installed locally.

GO-Global makes it easy for solution vendors to offer web-based versions of their Windows, UNIX, and Linux applications for secure, multi-platform deployment to remote users everywhere.
